

Dang Hyeona

A backend instructor connecting development, education, and business

I combine hands-on development and the One-to-One Programming business, then coach learners from concepts to implementation and outcomes.

Backend teaching

Data structures & algorithms

1:1 programming

Project practice coaching

Git collaboration & PR review

Career document mentoring

Topics across my teaching and coaching

This page summarizes recurring teaching topics from 1:1 instruction, lectures, project coaching, and mentoring.

01 Programming fundamentals

Cover syntax and problem-solving fundamentals at each learner's goal and current level.

- Set the lesson scope around the learner's goal and current level
- Reinforce syntax and problem solving through assignments and feedback

02 Data structures and algorithms

Connect data-structure choices with Java implementations and problem solving.

- Explain structure characteristics and selection criteria on a whiteboard
- Review implementation and solution flow with code examples

03 Team projects and collaboration

Help teams complete features, collaborate effectively, and present their outcomes.

- Organize requirements into feature units and project artifacts
- Give step-by-step feedback on Git, deployment, and presentations

04 Project records and career documents

Help learners turn project experience into records they can explain in application materials.

- Structure resumes and portfolios around career goals
- Review Git records and how feedback was applied

From the initial request to feedback, I design, run, and improve each course around learners and outcomes.

How I design and run a course

Ongoing preparation Independent study · reusable examples and practice materials

DESIGN

01

Confirm the request

Confirm the topic, schedule, and delivery constraints.

02

Set audience and outcomes

Define learner level and the expected result.

03

Survey learners when needed

Use questions and demand to calibrate examples and difficulty.

DELIVERY AND IMPROVEMENT

04

Prepare materials and practice

Build examples, exercises, assignments, and supporting material.

05

Run the course

Check understanding through explanation, practice, and Q&A.

06

Collect feedback and improve

Use feedback to refine materials and the next course.

Connecting backend concepts to implementation

At ZeroBase Backend School, I teach data structures and foundational algorithms through recorded Java lessons and problem solving.

Participation as an industry instructor in a backend employment school

Lecture materials with handwritten data structures and algorithm notes

01 Structure data structures and algorithms step by step

- Organize the learning sequence from setup to core concepts
- Build recorded lessons with handwritten notes and Java examples

02 Connect problem solving to implementation

- Explain the input, state, and output flow of each problem
- Compare solution flow and complexity to clarify when to apply it

Period 2025.03-Ongoing	Audience Backend learners	Scope Data structures · Foundational algorithms	Role Part instructor · Recorded
----------------------------------	-------------------------------------	---	---

An online course expanded through public content

I planned, taught, and produced an SW-Centered University open course on developer growth and learning methods.

Seven lessons on developer growth and learning methods

A public seven-part playlist with lesson runtimes

01 A seven-part roadmap for developer growth

- Sequence topics from coding and code management to time management and troubleshooting
- Structure each lesson as an independently viewable 30 to 40-minute video

02 Produce for a public learning channel

- Standardize lesson titles, thumbnails, and playlist order for browsing and review
- Own planning, teaching, and video production across seven public lessons

Format
7-part open course

Designing a goal-aligned 1:1 education service

At One-to-One Programming, I designed the education experience from consultation and trial lessons to classes, assignments, and feedback.

상담자

수강생 본인 000님

희망수업

프로그래밍 입문/기초

희망기간

미정

아래는 상담자의 요청에 따라 계획 세운 강사의 계획서입니다. 상세히 확인 부탁드립니다. 희망 수강생의 의견에 따라 변동될 수 있습니다. 최대한 원하는 점을 많이 달성해주시면 더욱 세세한 강의 계획을 세울 수 있습니다.

과외기간

미정

과외과목

Python

과외시수

1주 1회, 120분 (총 4회 480분)

과외금액

₩000,000 (00만원)

과외 수업 계획

1회차	파이썬 소개 및 변수, 파이썬의 연산자, 연산자 우선순위
2회차	자료형과 리스트 입문 내용
3회차	조건문과 반복문 - 개념과 기본 활용
4회차	중간 확인 및 알고리즘 테스트
5회차	함수 선언, 초기화, 호출 및 활용
6회차	리스트와 딕셔너리를 활용한 데이터 처리
7회차	tkinter, PIL를 활용한 파이썬 GUI
8회차	File In/Out put

현재 수업 가능 시간대

일	08:00 ~ 22:00
화	08:00 ~ 12:00, 16:00 ~ 19:00
수	08:00 ~ 17:00
목	08:00 ~ 12:00, 17:00 ~ 19:00
금	13:00 ~ 22:00

Confirming scope and plan from the consultation

Prepared materials from fundamentals to examples

01 A learning path from consultation to class

- Confirm goals and constraints through consultation
- Adjust scope and pace after the trial lesson

02 Individual assignments and feedback

- Provide implementation assignments and supporting material
- Reflect questions and outcomes in the next class

Period

2020.04-2020.10

Audience

Individual learners

Scope

Consultation · Trial · Classes · Assignments · Feedback

Role

Founder · Instructor

KimGwae · Soomgo course reviews

The review confirms lesson preparation and repeated explanations for points that were not yet understood.

The review mentions individualized pacing, appropriately difficult problems, and supporting materials.

Development conversations after the course

I continue to exchange messages about development learning and career direction after the course.

Why I continue teaching alongside development

Teaching helps me reorganize my technical knowledge and decision criteria. I teach only topics I have directly experienced, structured, and can explain with clarity.

Course topics Teach only experienced, structured topics Rather than learning a new topic solely for a request, I teach subjects grounded in my work and learning experience and organized in advance.	Teaching goal Experience as a reference, not an answer I share decisions and mistakes so learners can find a learning method and career direction that fits them.	Education access Prioritize learners with fewer opportunities I support nonprofit, school, and student requests when possible and prioritize learners with less access when schedules overlap.
--	--	---

Core goal Help learners choose a learning and career direction that fits them and take the next step independently.	Open to proposals Technical courses · Career talks · Mentoring I welcome proposals within my current teaching topics, including education-sharing requests from nonprofits, schools, and students. hadevyi@gmail.com
